Question 1

{} book.json > [ ] Books > { } 1

```json
{
    "Books":
    [
        {
            "name":"The Great Gatsby",
            "author":"F.Scott Fitzgerald",
            "publicationYear":1925,
            "genre":["Fiction, Classics"]
        },
        {
            "name":"To Kill a Mockingbird",
            "author":"Harper Lee",
            "publicationYear":1960,
            "genre":["Fiction, Coming-Of-Age"]
        }
    ]
}
```

Question 2

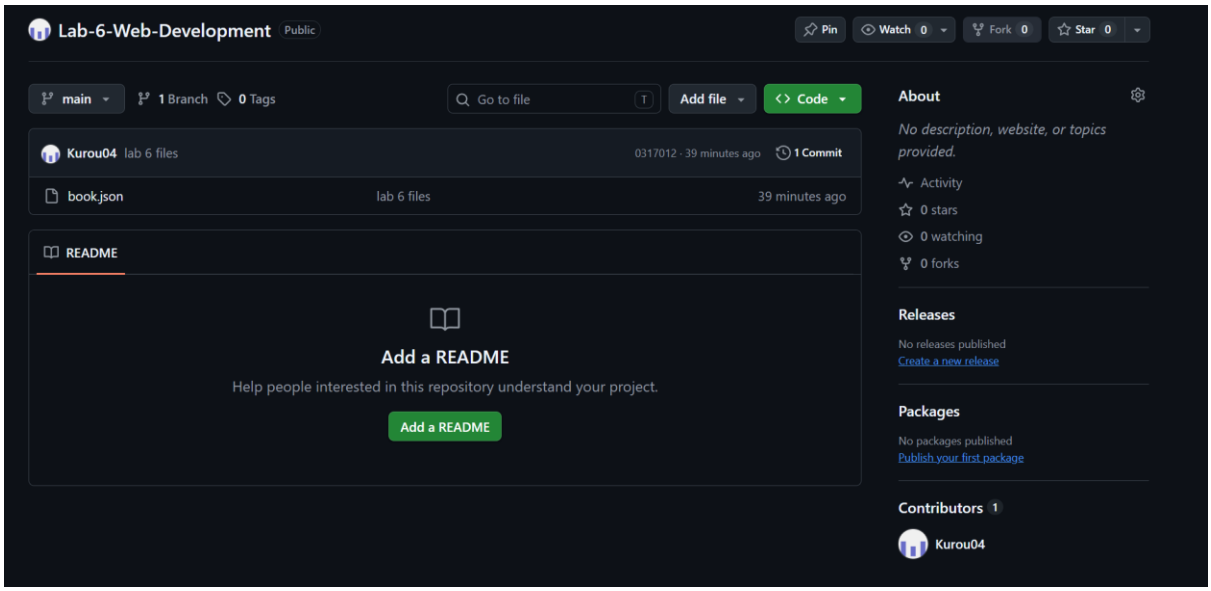

```html
<!DOCTYPE html>
<html>
    <head>
        <meta charset="utf-8">
        <meta http-equiv="X-UA-Compatible" content="IE=edge">
        <title></title>
        <meta name="description" content>
        <meta name="viewport" content="width=device-width, initial-scale=1">
        <link rel="stylesheet" href>
    </head>
    <body>
        <script>
            const bookData = {
                "Books":
                [
                    {
                        "name":"The Great Gatsby",
                        "author":"F.Scott Fitzgerald",
                        "publicationYear":1925,
                        "genre":["Fiction", "Classics"]
                    },
                    {
                        "name":"To Kill a Mockingbird",
                        "author":"Harper Lee",
                        "publicationYear":1960,
                        "genre":["Fiction", "Coming-Of-Age"]
                    }
                ]
            };

            console.log(bookData.Books[0].name);
            console.log(bookData.Books[1].author);

            bookData.Books.forEach(books => {
                console.log(books.genre);
            });
        </script>
    </body>
</html>
```

```

```

Question 3

Code:-

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="utf-8">
    <meta name="viewport" content="width=device-width, initial-scale=1">
    <title>Book Directory</title>
    <style>
        body { font-family: system-ui, sans-serif; max-width: 600px; margin: 2rem auto; padding: 0 1rem; }
        select { width: 100%; padding: .7rem; font-size: 1rem; }
        #details { border: 1px solid #ccc; border-radius: 6px; padding: 1rem; margin-top: 1.25rem; }
    </style>
</head>
<body>
    <h1>Book Directory</h1>

    <label for="bookSelect">Select a book title:</label>
    <select id="bookSelect">
        <option value="">-- Choose a book --</option>
    </select>

    <section id="details"><p>Select a book to see details.</p></section>

    <script>
        let books = [];

        const DATA_URL = 'https://raw.githubusercontent.com/Kurou04/Lab-6-Web-Development/refs/heads/main/book.json';

        const selectEl  = document.getElementById('bookSelect');
        const detailsEl = document.getElementById('details');

        // Fetch the JSON and fill the dropdown
        async function loadData() {
            try {
                const response = await fetch(DATA_URL);
                if (!response.ok) throw new Error('HTTP ' + response.status);
                const data = await response.json();
                books = data.Books;

                books.forEach(b => {
                    const option = document.createElement('option');
                    option.value = b.name;
                    option.textContent = b.name;
                    selectEl.appendChild(option);
                });
            } catch (err) {
                detailsEl.innerHTML = '<p>Could not load data from GitHub.</p>';
                console.error(err);
```

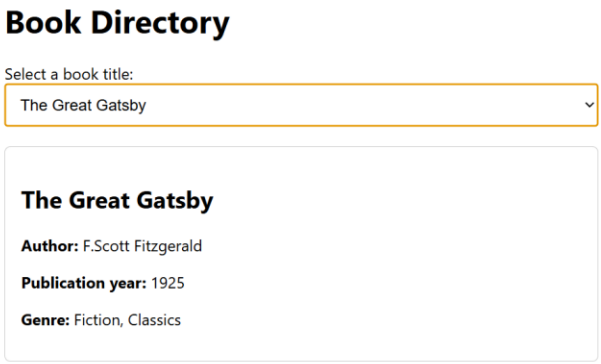

```
            }
        }

        // Find the matching book and display it
        function showDetails(title) {
            const b = books.find(x => x.name === title);
            if (!b) {
                detailsEl.innerHTML = '<p>Select a book to see details.</p>';
                return;
            }
            detailsEl.innerHTML = `
                <h2>${b.name}</h2>
